Inventor: Carmela Vitale

**Publication Number:** US4498586A

Product Description: The package saver is a plastic molded heat resistant device that is centered in the contents of a box to prevent damaging packaged products. One of the most common uses of the package saver can be found in a pizza box or a cake box.

Most products we come in contact with have a patent. Cars, bikes, grills, tractors, even the rolling chair your currently sitting in, or the mouse and computer screen you're using to view this email - you name it, it probably has a patent.

From the very first patent in 1790 to present day, patents have showcased the evolution and series of advancements that make products what they are today. They have inspired and ignited the passion to design and innovate generation after generation.

In our new semi-monthly newsletter, we will display a patent that has been published "on this day" in history. Not only is this a way to reminiscence (maybe even get a good laugh) at what products once were, but it also serves as a realization to how far we've come in the design, engineering, manufacturing, and technology industries.
